Aims and Scope

*Annals of Occupational Hygiene* is one of the world's top research journals on hazards and risks to health resulting from work. The journal is particularly interested in recognition, quantification, management and control of risk. It includes papers on basic mechanisms, human aspects and technology, and on environmental risks to humans when these are work-related. Published papers originate from all over the world, with about 60% from continental Europe and North America.

Topics covered include:
- chemical, physical and biological agents;
- measurement and control;
- process design;
- ergonomics;
- protection;
- occupational toxicology;
- epidemiology;
- assessment and management of risk;
- education and training.

There is heavy pressure on space in the journal. We do not normally consider the following types of paper:
- reports of health effects without corresponding information on causative agents and exposure, unless the effects are unexpected and likely to be of wide interest
- papers on infection control unless the problems are primarily occupational
- papers on physical accidents and resulting trauma injuries, unless these are related to factors that more widely affect health, such as chemical, physical and biological agents.

Current news items on events of interest to readers can be found on the website at: http://annhyg.oxfordjournals.org.
